

Eclipse: A Capsule Summary

by Ian Darwin, <http://www.darwinsys.com/java/>

Move Windows
Drag any View to any location.
Window->Show View adds views.
Double-click on any View's tab toggles it to/from full screen.

Source Menu:
Organize Imports
Gen. getters/setters
Override Methods
Gen. constructors

Refactor Menu:
Inline/extract
Rename
Very powerful!

Window Menu
Show View adds views
Preferences here!
Eclipse Update.

Perspective (set of Views):
Debug, Java, J2EE, ...

Run Last Program Down
Arrow=List
Last=Organize favorites

Package Explorer
View shows Java project view.
Navigator shows File System View.
JUnit shows last test run results

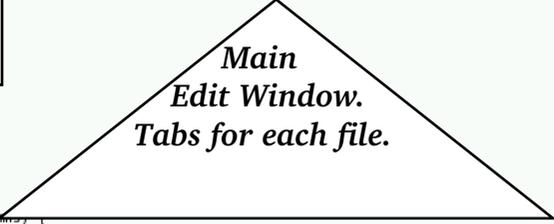

Other projects...

New Class, Test, Enum, Interface...

New Java Package

New Java Project

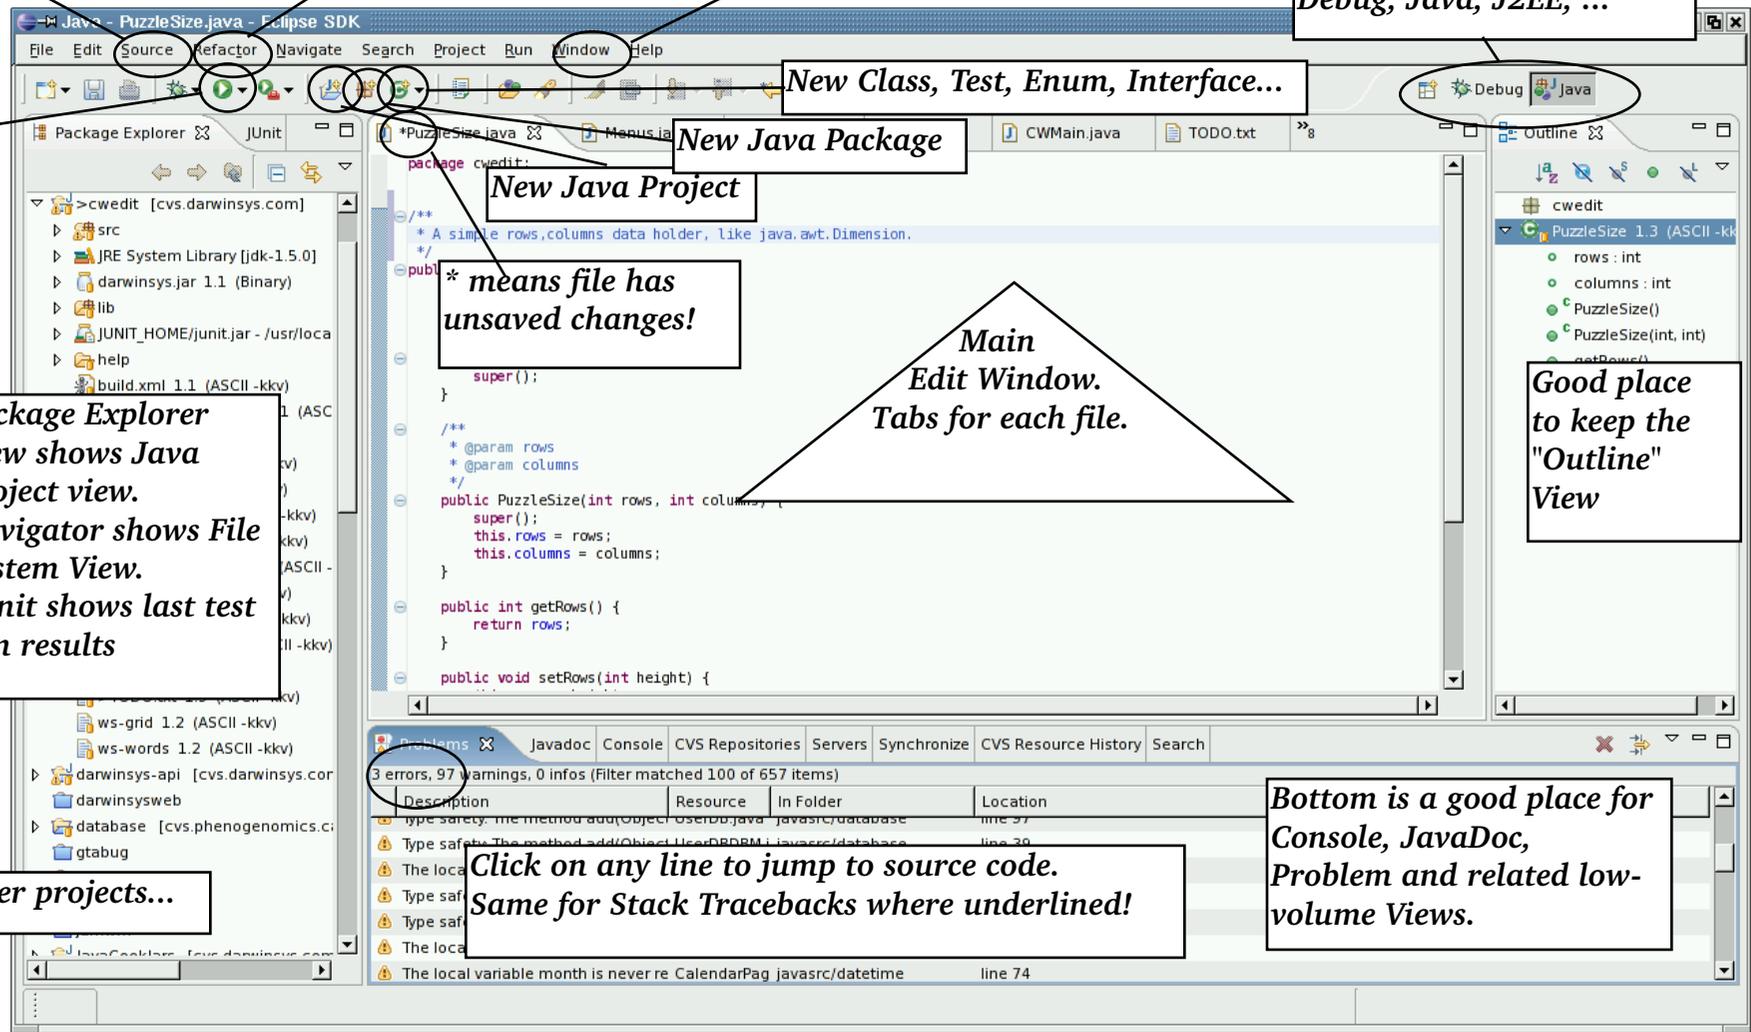

* means file has unsaved changes!

Good place to keep the "Outline" View

Bottom is a good place for Console, JavaDoc, Problem and related low-volume Views.

Click on any line to jump to source code.
Same for Stack Tracebacks where underlined!

Shortcuts: CTRL/L go to line #; Alt/Shift/R Rename; CTRL/Shift/R Open Resource (file) by name; Alt/Shift/I Inline, Alt/Shift/M Extract Method, Alt/Shift/L Extract Local Variable; CTRL/Shift/F Format code; CTRL/Shift/P goto matching Paren; CTRL/Shift/O Organize Imports, many more...

Need more? Help Menu->Welcome gives Tutorial, Samples, etc.
